Presenters:

Owen Shieh  
Meteorologist, NDPTC Weather and Climate Program

Dr. Sarah Park  
State Epidemiologist, Hawaii Department of Health, Chief of the Disease Outbreak Control Division

Edward “Chico” Caballero  
EMS Instructor and Paramedic with the City and County of Honolulu & American Medical Response

As Hawaiʻi emerges from an unusually active and dangerous Central Pacific Hurricane Season, the focus changes from the sky to the air around us. The 2015-2016 El Niño kept its promise of a hurricane season full of dangerous storms and close calls, but now conditions are ripe for a different hazard, dengue fever. This month, join NDPTC staff to learn about the science of El Niño and dengue fever and how the Hawaiʻi Department of Health and emergency medical services are responding to the new threat across our island chain.
