

This course prepares participants to analyze tornado science, the weather forecasting process, the tornado warning process, and apply course concepts to coordination and planning decisions. Since tornadoes can strike anywhere in the United States, it is important that every community be ready for the hazards associated with them. This management-level course is designed to engage a broad range of stakeholders to help build a culture of preparedness and strengthen community resilience. Multiple core capabilities will be addressed, with particular emphasis on “public information and warning,” “planning,” and “threats and hazard identification.”
